Computer Science

Department Website: https://www.haverford.edu/computer-science

Computer science is the representation and manipulation of information; it is the study of the theory, analysis, design, and implementation of the data structures that represent information and the algorithms that transform them. Computer science is interdisciplinary, with roots in mathematics, physics, and engineering, and with applications in virtually every academic discipline and professional enterprise.

Computer science at Haverford College covers these fundamental concepts, with emphasis on depth of thought, clarity of expression and attention to ethical impact. This approach is consistent with the principles of scientific education in the liberal arts. Our aim is to provide students with a base of skills and capabilities that support a wide variety of post-graduation goals, rather than to follow short-term fashions and fluctuations in computer hardware and software.

Learning Goals
Each student in computer science will be able to:

• **Realize their full ability to think deeply.** This involves mastering discipline-specific concepts such as abstraction, correctness, and complexity, and recognizing their broad and deep applications, both theoretically and practically, in new contexts.
  • Identify the role of abstraction in a computational problem situation; for example, distinguish a general problem from a specific problem instance, or understand the mapping between an abstract data type (ADT) and a given representation of that ADT.
  • Develop original, correct solutions demonstrating an appropriate level of abstraction, using two or more design techniques specific to the field.
  • Express a general solution in an appropriate programming language.
  • Analyze and compare the efficiency of alternative solutions, both quantitatively and qualitatively.
  • Increase confidence in a solution through a variety of approaches, including code review, testing, and mathematical reasoning.

• **Communicate their thinking clearly and effectively.** This involves taking a discovered or developed solution (or a given problem definition, etc.) and sharing that solution with peers, managers, clients, and other professionals, in a complete and persuasive manner, and with appropriate use of vocabulary and other tools (e.g., charts, proofs, demonstrations).

• **Identify, interpret and evaluate the theoretical, practical, and ethical implications of their work in the field.** This work is most easily identified as software, but other results might be papers written and published, projects chosen over others ignored, and even questions raised during the software development process.

Haverford’s Institutional Learning Goals are available on the President’s website, at http://hav.to/learninggoals.

Curriculum
Computer science offers:

• a major.
• a concentration for mathematics majors.
• a minor.

**NB: Neither the concentration nor the minor will be available to students admitted for the fall of 2019 and beyond; for prior classes, these programs will remain available on an "if space permits" basis.**

Computer science also contributes substantially to the Concentration in Scientific Computing. More information on this concentration can be found on the program’s website (https://www.haverford.edu/scientific-computing) or catalog entry.

The major in computer science is designed for students who wish to explore fundamental questions about computation and the role of computation in society. As part of this exploration, we provide many opportunities for students to design, implement, and analyze algorithms and data structures, and develop a larger-scale hardware/software system over the course of multiple semesters. These opportunities include both individual projects and group work, and provide experience with a variety of programming languages and with computer hardware. The senior experience, and the final projects in many classes, provide opportunities for students to explore their own interests in computer science.

Major Requirements
The major program covers the foundations of the discipline and provides a range of elective opportunities. While the computer science major is inspired by guidance from existing professional societies in computing, it is uniquely “Haverfordian”
in its emphasis on a collaborative approach to a rigorous field of inquiry.

Requirements are:

- CMSC H105 (Introduction to Computer Science) or CMSC H107 or Bryn Mawr CMSC B110.
- CMSC H106 (Introduction to Data Structures) or CMSC H107 or Bryn Mawr CMSC B206.
- CMSC H231 (Discrete Mathematics) (Students with strong backgrounds in mathematics and prior knowledge of the topics covered in CMSC H231 may wish to seek instructor permission to place into CMSC H340 / CMSC H345 without prior completion of CMSC H231 — in this case, the student may complete the requirements for the major with another course covering discrete mathematics, from the following list: Linear Optimization (MATH H210), Logic (MATH H394), Cryptography (MATH H394), Combinatorics (MATH H395), or STAT H203, STAT H218, STAT H286, or STAT H396).
- CMSC H240 (Principles of Computer Organization).
- CMSC H245 (Principles of Programming Languages).
- CMSC H340 (Analysis of Algorithms).
- CMSC H345 (Theory of Computation)
- CMSC H350 (Compiler Design) or CMSC B355 (Operating Systems) or CMSC H356 (Concurrency and Co-Design in Operating Systems).
- One additional 300 level course in computer science, and two additional courses numbered 200 or higher (one may be a related course in math or physics); computer science independent study courses can be counted if the student has received permission in advance to do so.
- CMSC H399 Senior Thesis and Seminar.

A maximum of two courses for the major can be transferred from outside the Bi-Co, and the introductory sequence, CMSC H240, CMSC H245, and either CMSC H340 or CMSC H345, must be taken at the Bi-Co.

Requests for exception must be pre-approved by the Chair of the Department.

**Senior Thesis**

The senior thesis in computer science is a capstone experience under the guidance of a faculty member. Students complete a thorough literature review in the initial term, and can continue with a research project into the subsequent term. Oral, poster and written presentations are required. This experience can include original work, but it must demonstrate deep thinking and an original exposition of an advanced topic.

Students are required to enroll in a one-credit senior seminar course in the Fall term to ensure that they successfully complete this graduation requirement. There is a series of class activities and deadlines to help keep students on track for completing their thesis. In the fall semester, these include: the advisor selection process; submitting the topic proposal; completing the literature review; and the public poster presentation. In the optional spring semester, these include: implementing their project proposed in the previous term; completing a rough draft of their thesis; rehearsing their oral presentations; submitting the final thesis document; and giving their oral presentation. A second reader provides feedback periodically to the student and their advisor as to whether progress is satisfactory.

A detailed schedule is provided to all students in the seminar at the beginning of the year.

**Senior Project Learning Goals**

The thesis work culminates in the writing and oral presentation of a paper. The student must also demonstrate the research skills required to produce this paper, in accordance with departmental deadlines.

An undergraduate senior paper may or may not include original research, but must present an in-depth exploration of a topic in computer science (with particular focus on understanding and evaluating some element of the computer science literature). The paper should demonstrate the student’s ability to apply, in a new context, the fundamental themes and objectives that connect all computer science classes, such as:

- separating a problem definition from its solution.
- describing clearly a proposed solution (typically with examples).
- understanding the correctness and applicability of a proposed solution.
- comparing several proposed solutions in terms of clarity, resource requirements, etc.

It is common for the thesis to center on a particular algorithm or computing system, and present the correctness and/or computational complexity thereof. However, this is not required. Students have successfully pursued other topics, such as human-computer interaction. The one core requirement is that the student demonstrates the ability to think deeply and communicate clearly about a computer science topic beyond the depth covered in classes.

The written thesis often resembles a review article, which explores in depth a collection of primary source articles from a single research group, or
a survey article, which compares primary source articles from different origins.

The oral presentation is given after the thesis has been completed, though preliminary presentations are often also given as practice (and for formative assessment) during the year. The presentation is not graded, although all students are required to give one.

The learning goals for the research that goes into the thesis experience are as follows:

**Aspirational (for the best students):**
A substantial written contribution that demonstrates original thinking and/or insight about a research area inside computer science, under the supervision of a faculty member. This should include a full literature review, appropriate replication of existing work, and either:

- a clear hypothesis (model), validation (proof/experiments), and analysis; or
- original expository work, including the extension of a proof, or a new proof of an existing theorem.

Since such theses include original material, they may constitute part of a publication (typically a joint publication with the advisor). However, publication is not required.

**Achievable (for most students):**
A confirmation and reiteration of existing work with an incremental contribution. Specifically, this includes a full literature review and either:

- a good and complete confirmation of an existing experiment on new data, including a good analysis; or
- an exposition of non-trivial graduate-level published work, including an existing proof or deep explanation of its extension/applicability (or its lack of extension) to other related concepts.

**Required (of all students):**
A non-trivial literature review/exposition of existing graduate-level published work, specifically:

- readable by someone who has understood only the core computer science undergraduate material (e.g., programming languages, hardware, theory, algorithms, and at least one intensive systems course such as compilers or operating systems).
- detailed enough to be clear to someone within the field.

The discussion of related work should:

- include all the important related/foundational work.
- clearly identify what problem is being addressed by each work (possibly one statement of this for many/all the works).
- clearly state the basic approach being taken.
- explain how each paper supports/evaluates its own results (proof/empirical-study/ad-hoc argument).
- make clear how this work relates to the thesis itself.
- in at least one case, really address the details of how the approach works (possibly several such discussions will be needed to address the point above).

**Senior Thesis Assessment**
The grade is approximately 75% based on the work done under the supervision of the faculty advisor and about 25% based on meeting the deadlines of and participating in the senior seminar, including the fall poster and spring presentation.

The senior paper is primarily assessed by the student’s advisor. Usually one or more other members of the department also read the paper and provide feedback for the student and advisor. If the student has a separate subject-matter advisor at another institution, that advisor is consulted during the grading of the paper if at all possible. All faculty involved in the thesis (and many students) are typically in attendance for the oral presentation.

The grade for the senior experience is assigned by the advisor, based on the quality of the student’s written paper (judged in terms of illustrating mastery of the learning objectives relevant to the chosen topic), on participation in the oral presentation, and on the work habits illustrated during the year’s work.

After thorough discussion by the Department, a student’s grade on the thesis will reflect how closely they have met the qualitative goals stated above. Specifically:

- 4.0: meets aspirational goals stated above.
- 3.0: meets achievable goals stated above.
- 2.0: meets required goals stated above.

All students should reach at least a 2.0 level of work on the material they submit by the end of the fall semester, and the faculty will certify students as having achieved this level (or not) in January.

In addition to submitting the written thesis document, students must also complete the assigned presentation elements, which typically include a
December poster presentation of the thesis topic and scope, and the final oral presentation of the thesis. These presentations are graded on evidence of preparation and on participation (i.e. showing up on time for one’s own presentation, attending the rehearsals of a few others, and providing feedback and/or asking questions). Faculty will provide informal feedback to the presenters on speaking style, professionalism, diction/grammar, poise, etc., but these elements are not included in the grade.

Minor Requirements

NB: The minor will not be available to students admitted for the fall of 2019 and beyond; for prior classes, these programs will remain available on an "if space permits" basis.

- CMSC H105 (Introduction to Computer Science) or CMSC H107 or Bryn Mawr CMSC B110.
- CMSC H106 (Introduction to Data Structures) or CMSC H107 or Bryn Mawr CMSC B206.
- CMSC H231 (Discrete Mathematics) (Students with strong backgrounds in mathematics and prior knowledge of the topics covered in CMSC H231 may wish to seek instructor permission to place into CMSC H340 /CMSC H345 without prior completion of CMSC H231—in this case, the student may complete the requirements for the minor with another course covering discrete mathematics, from the following list: MATH H210 (Linear Optimization), MATH H394 (Logic), MATH H394 (Cryptography), MATH H395 (Combinatorics), or STAT H203, STAT H218, STAT H286, or STAT H396).
- Either
  - CMSC H240 (Principles of Computer Organization) and a course on operating systems [i.e., either CMSC B355 (Operating Systems) or CMSC H356 (Concurrency and Co-Design in Operating Systems)], or
  - CMSC H245 (Principles of Programming Languages) and CMSC H350 (Compiler Design).
- Either CMSC H340 (Analysis of Algorithms) or CMSC H345 (Theory of Computation).

Computer Science Concentration for Mathematics Majors

NB: This concentration will not be available to students admitted for the fall of 2019 and beyond; for prior classes, these programs will remain available on an "if space permits" basis.

- CMSC H105 (Introduction to Computer Science) and CMSC H106 (Introduction to Data Structures), or CMSC H107.
- Either CMSC H240 (Principles of Computer Organization) or CMSC H245 (Principles of Programming Languages).
- Either CMSC H340 (Analysis of Algorithms) or CMSC H345 (Theory of Computation).
- One cross-listed MATH/CMSC course (Note that CMSC H231 meets this requirement and is the prerequisite for CMSC H340 and CMSC H345.)
- One additional 300-level computer science course.

Related Concentration

Concentration in Scientific Computing

Computation is the object of study for the computer science major and minor; computation is also an important tool with which to study many other disciplines. The Concentration in Scientific Computing focuses on the application of computational techniques in other natural and social sciences.

For more information about the concentration, please see the program’s catalog entry or website.

Affiliated Program

Engineering

Computer science majors may pursue various engineering disciplines via our partnerships with the University of Pennsylvania and CalTech. More information on this partnership can be found on the Engineering website.

Study Away

A maximum of two courses for the major can be transferred from outside the Bi-Co, and the introductory sequence, CMSC H240, CMSC H245, and either CMSC H340 or CMSC H345, must be taken at the Bi-Co.

Requests for exception to this policy must be pre-approved by the Chair of the Department.

Facilities

Information on all hardware and software resources for the programs in computer science may be found on the departmental website.

Faculty

John Dougherty
Associate Professor of Computer Science

Sorelle Friedler
Assistant Professor of Computer Science

Suzanne Lindell
Computer Science Lab Assistant

Steven Lindell
Professor of Computer Science

Sara Mathieson
Assistant Professor of Computer Science

David Wonnacott
Associate Professor and Chair of Computer Science

Affiliated Faculty

Jane Chandlee
Assistant Professor of Linguistics

David Lippel
Visiting Assistant Professor of Mathematics and Statistics

Robert Manning
The William H. and Johanna A. Harris Professor of Computational Science; Professor of Mathematics and Statistics; Associate Provost for Faculty Development and Support

Amanda Payne
Visiting Assistant Professor of Linguistics

Faculty at Bryn Mawr

Richard Eisenberg
Assistant Professor of Computer Science

Deepak Kumar
Professor of Computer Science

Kathleen Riley
Visiting Instructor of Computer Science

Dianna Xu
Chair and Professor of Computer Science

Courses

NB: Bryn Mawr courses are described at https://www.brynmawr.edu/cs/courses

CMSC H105 INTRODUCTION TO COMPUTER SCIENCE (1.0 Credit)
Suzanne Lindell
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
Introduction to the intellectual and software tools used to create and study algorithms: formal and informal problem specification; problem solving and algorithm design techniques; reliability, formal verification, testing, and peer code review techniques; program clarity, complexity and efficiency; functional and imperative paradigms; associated programming skills. Students must attend a one-hour weekly lab. Labs will be sectioned by course professor. Prerequisite(s): May not be taken by students who have taken any one of HC: CMSC 104, CMSC 107; BMC: CMSC 110, except by instructor consent
(Offered: Fall 2019)

CMSC H106 INTRODUCTION TO DATA STRUCTURES (1.0 Credit)
John Dougherty, Sorelle Friedler
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
An introduction to the fundamental data structures of computer science: strings, lists, stacks, queues, trees, BSTs, graphs, sets and their accompanying algorithms. Principles of algorithmic analysis and object reasoning and design will be introduced using mathematical techniques for the notions of both complexity and correctness. More practical issues, such as memory management and hashing, will also be covered. The programming language used to illustrate and implement these concepts will be able to support functional, imperative and object-oriented approaches. Emphasis will be placed on recursive thinking and its connection to iteration. Students must attend a one-hour weekly lab. Labs will be sectioned by course professor. Prerequisite(s): CMSC 105 (or 110 at Bryn Mawr) or instructor consent; may not be taken by students who have taken any one of HC: CMSC 104, CMSC 107; BMC: CMSC 206, except by instructor consent
(Offered: Spring 2020)

CMSC H107 INTRODUCTION TO COMPUTER SCIENCE AND DATA STRUCTURES (1.0 Credit)
Suzanne Lindell, Staff
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
An accelerated treatment of CMSC 105/106 for students with significant programming experience. Reviews programming paradigms, while focusing on techniques for reasoning about software: methodical testing, formal verification, code reviews, other topics as time permits. Includes lab work. Prerequisite(s): CMSC 105 or instructor consent, or placement by CS faculty, based on CS placement test. If you are interested in CMSC 107, you should preregister for the CMSC 105 section at the same time and take the placement test by the deadline, typically Wednesday before classes start; may not be taken by students who have taken any one of HC: CMSC 105, CMSC 106; BMC: CMSC 206, except by instructor consent
CMSC H208 SPEECH SYNTHESIS AND RECOGNITION (1.0 Credit)  
Jane Chandlee  
Division: Natural Science; Symbolic Reasoning  
Domain(s): C: Physical and Natural Processes  
An introduction to the methodologies used in the automated recognition and synthesis of human speech, focusing on Hidden Markov Models in recognition and unit selection in synthesis. Students will get hands-on experience with implementing the various components of these systems to better understand the techniques, challenges, and open areas of research. Crosslisted: Computer Science, Linguistics  
Prerequisite(s): LING 204, CS105 and 106 OR CS107 OR BMC 110 and 206 OR instructor consent  
(Offered: Fall 2019, Spring 2020)

CMSC H215 HUMAN COMPUTER INTERACTION (1.0 Credit)  
John Dougherty  
Division: Natural Science  
Covers the design, evaluation and implementation of interactive computing systems, along with the study of major phenomena surrounding these systems. Topics include: user-centered design, usability, affordances, cognitive and physical ergonomics, information and interactivity structures, interaction styles, interaction techniques, and user interface tools with a special focus on accessible and mobile interfaces. Prerequisite(s): CMSC106, 107, 206, or instructor consent  
(Offered: Fall 2019)

CMSC H222 SCIENTIFIC COMPUTING: CONTINUOUS SYSTEMS (1.0 Credit)  
Robert Manning  
Division: Natural Science; Quantitative  
Domain(s): C: Physical and Natural Processes  
A survey of major algorithms in modern scientific computing, with a focus on continuous problems. Topics include numerical differentiation and integration, numerical linear algebra, root-finding, optimization, Monte Carlo methods, and discretization of differential equations. Basic ideas of error analysis are presented. A regular computer lab introduces students to the software package Matlab, in which the algorithms are implemented and applied to various problems in the natural and social sciences. Prerequisite: Math 215 Cross-listed: Mathematics, Computer Science  

CMSC H231 DISCRETE MATHEMATICS (1.0 Credit)  
Steven Lindell  
Division: Natural Science; Quantitative  
Domain(s): C: Physical and Natural Processes  
An introduction to discrete mathematics with strong applications to computer science. Topics include set theory, functions and relations, propositional logic, proof techniques, difference equations, graphs, and trees. Co-requisite(s): CMSC 105, 107, or B110 or B113 or instructor consent  
(Offered: Fall 2019, Spring 2020)

CMSC H240 PRINCIPLES OF COMPUTER ORGANIZATION (1.0 Credit)  
John Dougherty  
Division: Natural Science; Quantitative  
Domain(s): C: Physical and Natural Processes  
Treatment of the hierarchical design of modern digital computers: boolean logic/algebra; truth tables; combinational and sequential circuits; state systems; register machines; instruction sets; memory organization; assembly language programming. Lectures cover the theoretical aspects of system architecture; labs provide implementation experience via a hardware simulator. Concurrent enrollment in this and two other CMSC lab courses requires permission of the instructor. Prerequisite(s): CMSC 106, or 107 or 206, and CMSC/Math 231 (or instructor consent)  
(Offered: Fall 2019)

CMSC H245 PRINCIPLES OF PROGRAMMING LANGUAGES (1.0 Credit)  
David Wonnacott  
Division: Natural Science  
Domain(s): C: Physical and Natural Processes  
Study of the design and implementation of modern programming languages: lexical and syntactic analysis; scoping mechanisms; run-time environments; implementation of structured, functional, object-oriented, and concurrent programming languages. Lectures cover theoretical foundations of language design and implementation; labs provide opportunities to both use and implement language features. Prerequisite(s): CMSC 106, or 107 or 206, and CMSC/Math 231 (or instructor consent)  
(Offered: Fall 2019, Spring 2020)

CMSC H311 COMPUTER SECURITY: ATTACKS AND DEFENSES (1.0 Credit)  
Division: Natural Science  
This course will serve as a broad introduction to the field of computer security, from two concurrent perspectives: attacks on systems, and defenses against those attacks. It covers topics such as memory attacks, web exploits, social-engineering, and information-flow. For students with experience in C programming, willingness to learn new languages (Python, SQL). Prerequisite(s): CMSC 245 (Haverford) or CMSC 246 (Bryn Mawr)
CMSC H340 ANALYSIS OF ALGORITHMS (1.0 Credit)
Sorelle Friedler
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
Qualitative and quantitative analysis of algorithms and their corresponding data structures from a precise mathematical point of view. Performance bounds, asymptotic and probabilistic analysis, worst case and average case behavior. Correctness and complexity. Particular classes of algorithms such as sorting searching will be studied in detail. Crosslisted: Computer Science, Mathematics
Prerequisite(s): CMSC 106 or 107 or B206, and 231, or instructor consent
(Offered: Fall 2019)

CMSC H345 THEORY OF COMPUTATION (1.0 Credit)
Division: Natural Science
Domain(s): C: Physical and Natural Processes
Introduction to the mathematical foundations of computer science: finite state automata, formal languages and grammars, Turing machines, computability, unsolvability, and computational complexity. Attendance at the weekly discussion section is required. Crosslisted: Computer Science, Mathematics
Prerequisite(s): (CMSC 106 or CMSC 107) and CMSC 231, and junior or senior standing, or instructor consent
(Offered: Spring 2020)

CMSC H350 COMPILER DESIGN (1.0 Credit)
David Wonnacott
Division: Natural Science
An introduction to compiler design, including the tools and software design techniques required for compiler construction. Students construct a working compiler using appropriate tools and techniques in a semester-long laboratory project. Lectures combine practical topics to support lab work with more abstract discussions of software design and advanced compilation techniques.
Prerequisite(s): CMSC 245 or instructor consent; concurrent enrollment in this and two other CMSC lab courses requires instructor consent

CMSC H356 CONCURRENCY AND CO-DESIGN IN OPERATING SYSTEMS (1.0 Credit)
John Dougherty
Division: Natural Science
Domain(s): C: Physical and Natural Processes
A practical introduction to the principles of shared-memory concurrent programming and of hardware/software co-design, which together underlie modern operating systems; includes a substantial laboratory component, currently using Java's high-level concurrency and the HERA architecture.
Prerequisite(s): CMSC 240 or instructor consent. Concurrent enrollment in this and two other CMSC lab courses requires permission of the instructor
(Offered: Spring 2020)

CMSC H360 MACHINE LEARNING (1.0 Credit)
Sara Mathieson
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
To explore both classical and modern approaches, with an emphasis on theoretical understanding. There will be a significant math component (statistics and probability in particular), as well as a substantial implementation component (as opposed to using high-level libraries). However, during the last part of the course we will use a few modern libraries such as TensorFlow and Keras. By the end of this course, students should be able to form a hypothesis about a dataset of interest, use a variety of methods and approaches to test your hypothesis, and be able to interpret the results to form a meaningful conclusion. We will focus on real-world, publicly available datasets, not generating new data.
Prerequisite(s): MATH 215, CMSC 106 or 107, and any one of the following: CMSC 231, 340, or 345
(Offered: Fall 2019)

CMSC H394 ADVANCED TOPICS IN THEORETICAL COMPUTER SCIENCE & DISCRETE MATHEMATICS: LOGIC (1.0 Credit)
David Lippel
Division: Natural Science
Domain(s): C: Physical and Natural Processes
An introduction to mathematical logic. Topics include: propositional logic, first-order logic, natural deduction, semantics, the Completeness and Compactness Theorems. Crosslisted: Mathematics, Computer Science
Prerequisite(s): Either MATH 333 or MATH 317, or instructor consent
(Offered: Fall 2019)

CMSC H395 MOBILE DEVELOPMENT FOR SOCIAL CHANGE (1.0 Credit)
Staff
Division: Natural Science
Domain(s): C: Physical and Natural Processes
An advanced course focusing on standard software engineering principles, object oriented programming, event-driven and multi-threaded programming, Android-specific mobile development concepts, and designing a positive user experience in the context of a semester-long placement with a local non-profit.
Prerequisite(s): CMSC 106, 107, B206, or instructor consent

CMSC H399 SENIOR THESIS (1.0 Credit)
Sorelle Friedler
Division: Natural Science
Spring seminar for seniors writing theses, dealing with the oral and written exposition of advanced material. Unlike the Fall seminar, this course is optional and can count as a 300-level elective for the major. Prerequisite(s): Senior standing (Offered: Fall 2019, Spring 2020)

**CMSC H460  TEACHING ASSISTANT (0.5 Credit)**  
*Steven Lindell*

**CMSC H480  INDEPENDENT STUDY (0.5 Credit)**  
*Sorelle Friedler, Staff*  
**Division:** Natural Science
Independent study, supervised by a member of the Computer Science department. Prerequisite(s): Instructor consent (Offered: Spring 2020)
