Now and over the coming decades, human societies face daunting environmental challenges. Energy consumption is expected to rise sharply while even present-day carbon emissions intensify global warming, threatening the finely balanced marine and terrestrial ecosystems upon which we rely for food, water and shelter. Global population pressure and sea-level rise, along with weather extremes, will create climate refugees and resource conflicts on an unprecedented scale. Responding to these cascading environmental, socioeconomic, and political challenges will require all the creativity, expertise and compassion we can muster, but neither scientific arguments nor social appeals have succeeded in mobilizing adequate action. We must find rational, holistic and ethically grounded ways to focus intellectual attention on the human-nature nexus. This is an essential endeavor of the field of Environmental Studies (ENVS).

Guided by a commitment to addressing challenges on multiple scales—by a holistic vision of humans in the environment, and by the particular problem at hand—ENVS scholars, educators and activists utilize a variety of methods and tools, which are represented in college curricula in many different ways. Students have the opportunity to pursue a Major in Environmental Studies through a curricular collaboration between Haverford and Bryn Mawr Colleges, or pursue a Minor in Environmental Studies to complement another major. The ENVS department is dedicated to preparing students who have the environmental expertise needed for the world they will inherit.

The Bi-College ENVS major combines the strengths of our two liberal arts campuses to create an interdisciplinary program that teaches students to synthesize diverse disciplinary knowledge and approaches, and to communicate effectively across disciplinary boundaries as they engage with environmental issues. In addressing these issues, ENVS students will apply critical thinking and analytical skills within a holistic, systems framework that includes social justice as an essential component.

The ENVS introductory course offers in-depth investigation of the theoretical and applied foundations of the study of the environment from all divisions. The major incorporates praxis community-based learning and core courses that examine the theoretical and empirical approaches that the natural sciences, social sciences, arts and humanities bring to local and global environmental questions. In addition, ENVS majors pursue an individually selected area of environmental expertise, a focus area, in order to gain a depth of knowledge, and to develop a sense of their own agency in addressing what most concerns them. To support these learning goals, the ENVS program provides opportunities for independent and collaborative research, including co-curricular learning, via local, national and international internships and opportunities to study abroad.

Haverford, Bryn Mawr, and Swarthmore also offer an interdisciplinary Tri-College ENVS minor, involving departments and faculty on all three campuses from the natural sciences, engineering, mathematics, the humanities, and the arts. The Tri-Co ENVS minor brings together students and faculty to explore interactions among earth systems, human societies, and local and global environments.

Both the Bi-Co ENVS major and the Tri-Co ENVS minor cultivate in students the capacity to identify and confront key environmental issues through a blend of multiple disciplines, encompassing historical, cultural, economic, political, scientific, and ethical modes of inquiry.

To declare the ENVS major or minor, students should contact the Environmental Studies chair or advisor at their home campus.

Learning Goals
The Bi-Co Environmental Studies major is an interdisciplinary program that teaches students to synthesize diverse disciplinary knowledge and approaches, and to communicate effectively across disciplinary boundaries as they engage with environmental issues. Students graduating with the ENVS major are adept at applying diverse modes of analysis to solve problems across a wide array of interconnected social and environmental challenges.

Environmental Studies students apply critical thinking and analytical skills within a holistic, systems framework that includes the following specific goals:

- Cultivation of environmental literacies, and the ability to read, analyze, and create products from the environmental social sciences, natural sciences, and humanities
- Experience with praxis activities in the context of intellectual work, with particular emphasis on experience working with community groups in a socially just and participatory framework
• Development and refining of written and oral communication skills for a variety of academic and non-academic audiences
• Knowledge of, and the ability to articulate, the role of different divisions of intellectual inquiry in environmental issues
• An understanding of the diverse modes of environmental theory, and experience translating complex environmental data into actionable conclusions or revised theory.

Haverford’s Institutional Learning Goals are available on the President’s website, at http://hav.to/learninggoals.

Curriculum
There are two curricular pathways through Environmental Studies: the ENVS major and ENVS minor.

ENVS Major (Bi-Co)
The ENVS major curriculum is designed to maintain a balance between cultivating broad environmental literacies and developing a focused area of expertise with associated skills. This program includes core classes and a self-designed “focus area” that can be completed with coursework from Haverford, Bryn Mawr, and Swarthmore.

ENVS Minor (Tri-Co)
The ENVS minor curriculum is designed to complement any major at Haverford, Bryn Mawr or Swarthmore, pending approval of the student’s coursework plan by the home department and the ENVS chair.

Up to date information about the Environmental Studies department’s activities can be found at the departmental website.

Major Requirements
Students are required to take a minimum of 11 courses in the Environmental Studies major.

I. Core courses (6 credits)
Six required courses are in the core program, which consists of:

• ENVS H101 or ENVS B101 or ENVS S001: Case Studies in Environmental Issues
• ENVS H201 or ENVS B201: Laboratory in Environmental Sciences
• ENVS H202 or ENVS B202: Environment and Society
• ENVS H203 or ENVS B203: Environmental Humanities
• ENVS H204 or ENVS B204: Environmental Studies Praxis
• ENVS H397 or ENVS B397 or ENVS S091: Environmental Studies Senior Capstone (during the fall or spring semester of the senior year)

Students interested in pursuing an ENVS major are strongly encouraged to take ENVS 101 during their first year of study.

ENVS 101 and 397 are each offered two times per year: once at Haverford and once at Bryn Mawr, frequently in alternate semesters. Students are welcome to take these courses on either campus.

II. Electives and focus area (5 credits)
In addition to the core courses, ENVS majors must complete five electives. A wide variety of environmentally themed courses may serve as ENVS electives, including many courses offered by other departments and programs. Each student’s set of elective courses must fulfill the following requirements:

• A minimum of one course must come from each of two broad divisional groups:
  • Natural sciences, mathematics, and engineering;
  • Social sciences, humanities, and arts.
• At least two elective courses must be taken at the 300-level or equivalent.
• At least three elective courses must articulate a coherent intellectual or thematic focus (a “focus area”) that students develop in consultation with their ENVS advisor;

III. Focus area
The possibilities of a focus area are many. A student’s focus area may be organized by a specific perspective on the study of the environment, a particular interdisciplinary focus, or even a geographic region. Focus areas are designated in consultation with an ENVS advisor. Early planning for the ENVS major allows students to begin satisfying prerequisites for advanced focus area courses.

Sample focus area topics include, but are not limited to: Environment and Society, Environmental Policy, Earth Systems, Environmental Modeling, Environmental Art and Technology, and Environment in East Asia.

Courses taken as ENVS major electives need not be prefixed with “ENVS” in the course catalog. Advanced courses with appropriate thematic content offered by any program, from Africana Studies, through Mathematics, to Visual Studies, may be counted.

Upon declaration of the ENVS major, the coursework plan must be approved by a major advisor on the student’s home campus. Courses approved for the
Environmental Studies major at Swarthmore can be
taken for the Bi-Co ENVS major or substituted for
requirements contingent upon the major advisor’s
approval.

Courses taken while studying abroad or off-
campus may be approved for the ENVS major by
the major advisor in consultation with the Bi-Co
ENVS Department faculty.

Senior Project

Students majoring in Environmental Studies will
pursue their capstone experience in any one of a
number of ways, centered within the one-semester
ENVS H397 or ENVS B397 course. In this course,
students will design and complete a project under
the supervision of a faculty member that builds upon
methods learned in the ENVS 200-level sequence
and elaborated on during the Focus Area. In most
cases, ENVS 397 will involve collaborating with
one or more outside organizations or groups, and
senior projects will be an individual project designed
in concert with the faculty member and these
organizations. For example, senior projects could
include, but are not limited to, digital mapping
and annotation of green space, the design and
implementation of an environmental education
curricular module, or an environmental art project.

Students are strongly encouraged to consider
possible senior project topics or techniques they
would like to use prior to their senior year, and to be
in dialogue with their faculty advisors about possible
senior projects during the third year of study.

Senior Project Learning Goals

• Collaboration with others, including
  students, faculty and staff, and outside
  partners
  Each senior is expected to hone the skills required
to collaborate in an effective fashion throughout
the course of the senior project. These skills are
likely to include working effectively outside of the
campus space.

• Application of techniques and methods
  acquired during the major sequence
  The senior project is an opportunity for each
student to demonstrate and apply the skills that
are acquired during the ENVS major sequence,
from research skills to communication skills.
Students are expected to bring their unique
strengths, approaches, and prior coursework to
bear on the senior project.

• Independent knowledge and responsibility
  Each senior is responsible for their share of the
project, even if it is part of a larger, team-based,
collaborative effort. Students will demonstrate
responsibility in the design and implementation
of the project, in conversation with the faculty
advisor and outside voices. Careful planning and
consistent work effort are essential to completing
a senior project.

• Ethical practices for campus and community-
  oriented work
  Students will build upon the knowledge
acquired during the ENVS 200-level sequence
to collaborate with on- and off-campus partners
in an ethical and responsible way. This includes
practicing ethical scholarship, sharing work
effectively, and collaborating.

• Creativity in approaches to major questions
  Students will address the central topic of their
senior project in creative and original ways. This
should include some element of creative risk or
ambition, which is encouraged and supervised by
the ENVS faculty.

Senior Project Assessment

At the conclusion of a Senior Project, students
will be expected to present their final project in
an oral form to their peers and faculty from the
ENVS department. In addition, each student will also
be expected to submit a written form of the final
project that documents their project and reflects
on the experience. The faculty member supervising
ENVS H397 will evaluate student work based on
the quality and effort brought to bear during the
project, and will assign a final numerical grade for
the Senior Project. This faculty member may consult
with other members of the ENVS department to
provide feedback to individual students prior to
Commencement.

Minor Requirements

The Tri-Co ENVS minor consists of six courses,
including an introductory course. Students may
complete the introductory course at any of the three
campuses. The six required courses are:

• A required introductory course to be taken prior
to the senior year. This may be ENVS H101 at
Haverford or ENVS B101 at Bryn Mawr or the
parallel course at Swarthmore (ENVS S001). Any
one of these courses satisfies the requirement,
and students may take no more than one such
course for credit toward the minor.

• Four elective course credits from approved lists of
core and cognate courses, including two credits
in each of the following two categories. Students
may use no more than one cognate course credit
for each category. (See the ENVS website for
course lists and more about core and cognate
courses.) No more than one of these four course
credits may be in the student’s major.

• Environmental Science, Engineering,
  and Math: courses that build understanding
and knowledge of scientific methods and
theories, and explore how these can be applied in identifying and addressing environmental challenges. At least one of the courses in this category must have a laboratory component.

- **Environmental Social Sciences, Humanities, and Arts:** courses that build understanding and knowledge of social and political structures as well as ethical considerations, and how these inform our individual and collective responses to environmental challenges.

- An advanced elective in Environmental Studies (300-level, or its equivalent at Swarthmore) that can be from either category.

Haverford students interested in the ENVS minor should plan their course schedule with the ENVS Chair in consultation with their major advisor. In choosing electives, students should aim to include mostly intermediate or advanced courses.

**Affiliated Programs**

For information about faculty and courses in Environmental Studies at Swarthmore, visit the website of that program.

**Concentrations and Interdisciplinary Minors**

Environmental Studies contributes to the following concentrations and interdisciplinary minors:

- Health Studies
- Peace, Justice, and Human Rights
- Visual Studies

**Study Abroad**

The Bi-Co ENVS Department strongly encourages students to study abroad if it fits with their career plans. Students planning to major or minor in ENVS may receive course credit by participation in programs which offer environmental content, including but not limited to programs in Australia, Costa Rica, Denmark, Ecuador, Germany, Iceland, Scotland and South Africa.

Students may receive course credit for elective courses, at the equivalent of the 200 level or above, that contribute to the major’s “focus area” or the four non-core classes in the ENVS minor. Students majoring in ENVS are required to take ENVS 101 and ENVS 397 at Haverford or Bryn Mawr, or the equivalent courses at Swarthmore and strongly recommended to take the four 200-level core courses within the Bi-Co.

**Environmental Studies Faculty at Haverford**

- **David Backus**
  Visiting Professor

- **Joshua Moses**
  Associate Professor of Anthropology and Environmental Studies; Visual Culture, Arts, and Media Faculty Fellow (2020-2022)

- **Helen White**
  Associate Provost for Curricular Development and Research; Professor of Chemistry and Environmental Studies

- **Jonathan Wilson**
  Associate Professor and Chair of Environmental Studies

- **Talia Young**
  Visiting Assistant Professor of Environmental Studies

**Environmental Studies Faculty at Bryn Mawr**

- **Anastasia Baginski**
  Visiting Instructor

- **Sara Grossman**
  Assistant Professor of Environmental Studies on the Johanna Alderfer Harris and William H. Harris Professorship in Environmental Studies

- **Carol Hager**
  Professor of Environmental Studies and Political Science

**Affiliated Faculty at Haverford**

- **Craig Borowia**
  Professor of Political Science

- **Thomas Donahue**
  Visiting Assistant Professor of Political Science

- **C. Stephen Finley**
  Professor of English

- **Benjamin Le**
  Associate Provost for Faculty Development; Professor of Psychology

- **Graciela Michelotti**
  Associate Professor of Spanish

- **Robert C. Scarrow**
  Professor and Chair of Chemistry

- **Erin Schoneveld**
  Associate Professor of East Asian Languages and Cultures and Visual Studies
Kristen Whalen
Assistant Professor of Biology

Affiliated Faculty at Bryn Mawr

Victor Donnay
Professor of Mathematics on the William R. Kenan, Jr. Chair

Robert Dostal
Rufus M. Jones Professor and Chair of Philosophy

Jonas Goldsmith
Associate Professor of Chemistry

Karen Greif
Professor of Biology

Yonglin Jiang
Associate Professor of East Asian Languages and Cultures

Shiamin Kwa
Assistant Professor of East Asian Languages and Cultures

Gary McDonogh
Helen Herrmann Chair and Professor of Growth and Structure of Cities

Tom Mozdzer
Assistant Professor of Biology

Sydne Record
Assistant Professor of Biology

Michael Rock
Samuel and Etta Wexler Professor of Economic History

Nathan Wright
Chair and Associate Professor of Sociology

Courses at Haverford

Africana Studies Courses

AFST H136 BLACK ECOLOGIES (1.0 Credit)
Tajah Ebram
This course engages writings and cultural works about Black eco-literary and ecological traditions. Black Ecologies focuses on the multiple ecological and spatial conditions that have over-determined Black life and relationships to nature including the middle passage, slavery, racial segregation, food apartheid, gentrification and even incarceration. All these phenomena have produced unequal access to natural resources, space, food and land through systems that racialize, gender and commodify space. By exploring Black cultural and land based worker’s literary, cultural, and community responses to anti-Black environmental conditions, we will consider how Black communities reclaim spatial autonomy through creative modes of collective liberation. Student’s critical and creative writing will be based on course texts and outdoor experiences of observation and laboring collectively at Haverfarm. Open only to first-year students as assigned by the Director of College Writing. Crosslisted: AFST,ENVS. (Offered: Fall 2021; typically offered: Occasionally)

Anthropology Courses

ANTH H112 THE ANTHROPOLOGY OF ARCHITECTURE (1.0 Credit)
Division: Social Science
Domain(s): B: Analysis of the Social World
A survey of anthropological approaches to architecture, with a particular interest in how architecture expresses senses of place. Readings will cover indigenous and vernacular architecture, the modernist movement, ecological design, and forms of housing.
ANTH H217 METHODS IN DESIGN
ANTHROPOLOGY (1.0 Credit)
Staff
Division: Social Science
Domain(s): B: Analysis of the Social World
An introduction to research methods in Design Anthropology. Readings are drawn from Anthropology, Design, and Science and Technology Studies (STS), and the course will introduce fundamental concepts and methods in STS. Each student will conduct ethnographic research into a design practice of their choice. Prerequisite(s): An introductory course in Anthropology, Sociology, or Art History, or instructor consent

(Typically offered: Occasionally)

ANTH H281 INTRODUCTION TO ENVIRONMENTAL ANTHROPOLOGY (1.0 Credit)
Zainab Saleh
Division: Social Science
Domain(s): B: Analysis of the Social World
An introduction to the ideas and methods central to environmental anthropology. Topics covered will include political ecology, crises and uncertainty, indigeneity and community management.

(Typically offered: Every Year)

ANTH H302 OIL, CULTURE, POWER (1.0 Credit)
Zainab Saleh
Division: Social Science
Domain(s): B: Analysis of the Social World
This course will examine the political, social, and cultural history of oil. As the single most important commodity in the world, the story of control over this highly prized resource is a complex and violent one. It will discuss the ways in which oil has defined the fates empires and nation-states, the rise and fall of local political movements, violence, neoliberal governmentality, and knowledge production. Prerequisite(s): One 100-level course in anthropology, political science, sociology, or history, or instructor consent

(Offered: Spring 2022; typically offered: Occasionally)

BIOL H326 BIOCHEMICAL ADAPTATIONS (0.5 Credit)
Kristen Whalen
Division: Natural Science
Domain(s): C: Physical and Natural Processes
This course will cover the diversity of physiological mechanisms and biochemical strategies that help organisms, from microbes to mammals, adapt to various environmental conditions. Emphasis put on biochemical evolution in response to changing environmental conditions. Crosslisted: Biology, Environmental Studies
Prerequisite(s): BIOL H200A and B with a grade of 2.0 or above, or instructor consent

(Offered: Spring 2022; typically offered: Every Year)

BIOL H456 ADVANCED TOPICS IN BIOLOGY OF MARINE LIFE (0.5 Credit)
Kristen Whalen
Division: Natural Science
Exploration of marine metazoan evolution through the lens of behavioral, morphological, biochemical, and physiological adaptations to various ocean regimes. Readings from primary literature will cover physio-chemical properties of seawater, abiotic/biotic organismal interactions, symbiosis, energy production, human impacts, and phylogenetic relationships. Crosslisted: Biology, Environmental Studies
Prerequisite(s): BIOL H300 and BIOL H301 with a grade of 2.0 or above, or instructor consent

(Offered: Fall 2021)

Chemistry Courses
CHEM H358 TOPICS IN ENVIRONMENTAL CHEMISTRY: HEAVY METALS IN OUR ENVIRONMENT, TOPICS IN ENVIRONMENTAL CHEMISTRY (0.5 Credit)
Helen White, Robert Scarrow
Division: Natural Science
Domain(s): C: Physical and Natural Processes
Three lectures for one-half semester (one-half course credit). This course will examine chemical processes that occur in natural waters, soils and the atmosphere. Specific topics will be chosen with input from enrolled students, who will be expected to share in discussion leadership. Prerequisite(s): CHEM H222 (or other organic chemistry course such as CHEM B211). This course will examine chemical processes that occur in natural waters, soils and the atmosphere. Specific topics will be chosen with input from enrolled students, who will be expected to share in discussion leadership. CHEM 358 may be repeated once for credit as long as the topical

Security. Does not count towards the Biology major. Crosslisted: Biology, Environmental Studies

(Typically offered: Occasionally)
themes differ. Crosslisted: Chemistry, Environmental Studies Prerequisite(s): CHEM H222 (or other organic chemistry course such as CHEM B211) (Typically offered: Occasionally)

English Courses
ENGL H356 STUDIES IN AMERICAN ENVIRONMENT AND PLACE (1.0 Credit)
Stephen Finley
Division: Humanities
Texts mostly 19th and 20th-c. American, but beginning earlier, with colonial New England; then Thoreau, Maclean, Snyder, Dillard, Least Heat Moon, Ammons, Mary Oliver, E. O. Wilson. Topics: cultural production of landscape (rural and urban), environmental history, place studies, landscape painting, ecology. Prerequisite(s): Two 200-level HU courses or instructor consent (Offered: Fall 2021; typically offered: Every other Year)

Environmental Studies Courses
ENVS H101 CASE STUDIES IN ENVIRONMENTAL ISSUES: CONCEPTS, CONTEXTS, & CONUNDRUMS (1.0 Credit)
Jonathan Wilson
Domain(s): A: Meaning, Interpretation (Texts); B: Analysis of the Social World; C: Physical and Natural Processes
The course offers a cross-disciplinary introduction to environmental studies. Tracing an arc from historical analysis to practical engagement, distinctive approaches to key categories of environmental inquiry are presented: political ecology, earth science, energy, economics, public health, ecological design, sustainability, policy, and environmental ethics. Basic concepts, such as thermodynamics, biodiversity, cost-benefit analysis, scale, modernization, enclosure, the commons, and situational ethics, are variously defined and employed within specific explorations of environmental challenges in the modern world. Prerequisite(s): Not open to students who have taken ENVS 101 at Bryn Mawr or Swarthmore (Offered: Fall 2021; typically offered: Every Fall)

ENVS H102 PERSPECTIVES IN BIOLOGY: GENETIC ENGINEERING, FARMING, AND FOOD (1.0 Credit)
Staff
Division: Natural Science
Domain(s): C: Physical and Natural Processes
An examination of the science behind genetically engineered (GE) foods. The technology will be examined and compared to other plant breeding practices and the potential role of GE crops will be considered in the context of global food security. Does not count towards the Biology major. Crosslisted: Biology, Environmental Studies (Typically offered: Occasionally)

ENVS H118 PERSPECTIVES IN BIOLOGY: PLANTS AND PEOPLE (1.0 Credit)
Jonathan Wilson
Division: Natural Science
Domain(s): B: Analysis of the Social World; C: Physical and Natural Processes
A multidisciplinary approach to the co-evolution and co-domestication of plants and humans. Topics will include the biology, physiology, evolution, and cultivation of key plants, embedded within their social history and environmental effects. Intended for non-majors and meets in parallel with Biology 318. Crosslisted: Biology, Environmental Studies (Offered: Spring 2022; typically offered: Every Year)

ENVS H136 BLACK ECOLOGIES (1.0 Credit)
Tajah Ebram
This course engages writings and cultural works about Black eco-literary and ecological traditions. Black Ecologies focuses on the multiple ecological and spatial conditions that have over-determined Black life and relationships to nature including the middle passage, slavery, racial segregation, food apartheid, gentrification and even incarceration. All these phenomena have produced unequal access to natural resources, space, food and land through systems that racialize, gender and commodify space. By exploring Black cultural and land based worker’s literary, cultural, and community responses to anti-Black environmental conditions, we will consider how Black communities reclaim spatial autonomy through creative modes of collective liberation. Student’s critical and creative writing will be based on course texts and outdoor experiences of observation and laboring collectively at Haverfarm. Open only to first-year students as assigned by the Director of College Writing. Crosslisted: AFST, ENVS. (Offered: Fall 2021; typically offered: Occasionally)

ENVS H201 LABORATORY IN ENVIRONMENTAL SCIENCES (1.0 Credit)
Jonathan Wilson, Staff
Division: Natural Science; Quantitative
Domain(s): C: Physical and Natural Processes
A lab-intensive introduction to environmental science research, exploring perspectives on scientific knowledge production, application-oriented scientific reporting, and historical context for sites of study. Includes field sampling and data collection, analysis of multiple datasets, and communication of findings to diverse audiences. Prerequisite(s): ENVS 101
ENVS H204 PLACE, PEOPLE AND COLLABORATIVE RESEARCH IN ENVIRONMENTAL STUDIES (1.0 Credit)
Staff
Division: Social Science
Domain(s): A: Meaning, Interpretation (Texts); B: Analysis of the Social World
This course focuses on the ethics and practice of community collaboration and community based research in the context of environmental challenges. Students will gain grounding in both theory and practice incorporating themes related to race, class, gender and environmental justice. Students will complete 4-5 hours of fieldwork per week.
Prerequisite(s): ENVS 101 and at least one of ENVS 201, 202, 203 or instructor’s permission.
(Typically offered: Every Year)

ENVS H218 INDUSTRY & THE ENVIRONMENT: UNDERSTANDING ENVIRONMENTAL RESPONSIBILITY WITHIN THE TEXTILE INDUSTRY (1.0 Credit)
Division: Natural Science
Domain(s): A: Meaning, Interpretation (Texts); C: Physical and Natural Processes
We will work towards understanding how the environment is impacted by industry. Parallel with gaining a foundational understanding of the processes used to generate products and how these processes interact with the environment, we will learn about industrial innovators and community organizations trying to transform industry to become more environmentally and socially responsible.
Prerequisite(s): ENVS101 or instructor approval
(Typically offered: Only Once)

ENVS H281 INTRODUCTION TO ENVIRONMENTAL ANTHROPOLOGY (1.0 Credit)
Staff
Division: Social Science
Domain(s): B: Analysis of the Social World
An introduction to the ideas and methods central to environmental anthropology. Topics covered will include political ecology, crises and uncertainty, indigeneity and community management.
(Typically offered: Every Year)

ENVS H309 PEOPLE, PLACE, AND COLLABORATIVE RESEARCH IN THE URBAN ENVIRONMENT (1.0 Credit)
Staff
Division: Social Science
Domain(s): B: Analysis of the Social World
Taught in Philadelphia as part of the Tri-Co Philly Program, this transdisciplinary, Philadelphia-based, course focuses on critical urban environmental issues. With the blunt challenges of global warming and inequality in mind, we seek to apply theory to the practice of engagement with ongoing urban struggles. Collaborative environmental work with urban communities is inherently interdisciplinary, drawing on anthropology, urban planning, public health, ecology, and geography. Themes will include the intersections of race, class, and gender; environmental justice; rethinking bioregionalism; urban environmental social movements; urban farming/gardening; brownfields; radical municipalism; tactical urbanism; transformative education; Afrophuturism; action research; and ideas of place, home and nature. The course will focus on the ethics and practice of community collaboration and community-based research in environmental work in urban settings. Students will work directly with community groups, developing relationships, and collaborating on research relevant to their efforts. As the course title indicates, the arts of collaboration—on multiple levels—are central to this course.
Readings include: Joan Iverson Nassauer, Roger Sanjek, Peter Berg, Donald Schon, Anne Rademencher, Gregory Bateson, Jane Jacobs, Grace Lee Boggs Meredith Minkler, Baltimore Ecosystem Study, adrienne maree brown, Davydd Greenwood, Miles Horton; Eve Tuck, Kim Fortun, Julian Agyeman.
Crosslisted: Anthropology, Environmental Studies
(Typically offered: Occasionally)

ENVS H318 ECONOMIC BOTANY (1.0 Credit)
Jonathan Wilson
Division: Natural Science
Domain(s): B: Analysis of the Social World; C: Physical and Natural Processes
A multidisciplinary approach to the coevolution and co-domestication of plants and humans. Topics will include the biology, physiology, evolution, and cultivation of key plants, embedded within their social history and environmental effects, and explored at an advanced level. Meets in parallel with Biology 118. Prerequisite(s): 200-level course in Anthropology, Biology, Chemistry, or Geology or ENVS H101 and permission of instructor Crosslisted: Biology, Environmental Studies
(Formerly offered: Spring 2022; typically offered: Every Year)

ENVS H326 BIOCHEMICAL ADAPTATIONS (0.5 Credit)
Kristen Whalen
Division: Natural Science
Domain(s): C: Physical and Natural Processes
This course will cover the diversity of physiological mechanisms and biochemical strategies that help organisms, from microbes to mammals, adapt to various environmental conditions. Emphasis put on biochemical evolution in response to changing environmental conditions.
Environmental Studies (Bi-Co)

environmental conditions. Crosslisted: Biology, Environmental Studies Prerequisite(s): BIOL H200A and B with a grade of 2.0 or above, or instructor consent
(Offered: Spring 2022; typically offered: Every Year)

ENVS H358 TOPICS IN ENVIRONMENTAL CHEMISTRY (0.5 Credit)
Helen White
Division: Natural Science
Domain(s): C: Physical and Natural Processes
This course will examine chemical processes that occur in natural waters, soils and the atmosphere. Specific topics will be chosen with input from enrolled students, who will be expected to share in discussion leadership. CHEM 358 may be repeated once for credit as long as the topical themes differ. Crosslisted: Chemistry, Environmental Studies Prerequisite(s): CHEM H222 (or other organic chemistry course such as CHEM B211) (Typically offered: Occasionally)

ENVS H397 SENIOR SEMINAR IN ENVIRONMENTAL STUDIES (1.0 Credit)
Staff
Domain(s): A: Meaning, Interpretation (Texts); B: Analysis of the Social World; C: Physical and Natural Processes
This capstone Environmental Studies course is designed to allow Environmental Studies seniors to actively engage in environmental problem solving by bringing the perspectives and skills gained from their majors and applying them to collaborative, interdisciplinary projects. Enrollment Preference(s): Limited to seniors
(Offered: Fall 2021, Spring 2022; typically offered: Every Fall)

ENVS H456 ADVANCED TOPICS IN BIOLOGY OF MARINE LIFE (0.5 Credit)
Kristen Whalen
Division: Natural Science
Exploration of marine metazoan evolution through the lens of behavioral, morphological, biochemical, and physiological adaptations to various ocean regimes. Readings from primary literature will cover physio-chemical properties of seawater, abiotic/biotic organismal interactions, symbiosis, energy production, human impacts, and phylogenetic relationships. Crosslisted: Biology, Environmental Studies Prerequisite(s): BIOL H300 and BIOL H301 with a grade of 2.0 or above, or instructor consent
(Offered: Fall 2021)

ENVS H480 INDEPENDENT STUDY (1.0 Credit)
Jonathan Wilson

History Courses
HIST H253 THE HISTORY OF THE US BUILT ENVIRONMENT, 1870 TO THE PRESENT (1.0 Credit)
Andrew Friedman
Division: Social Science
Domain(s): A: Meaning, Interpretation (Texts); B: Analysis of the Social World
This course looks at the history of the U.S. through its built environment, or the physical spaces & landscapes through which Americans constructed their habits, hopes, and divisions. We will investigate how struggles over the U.S. polity came to be reflected in the built world. Topics include the creation of property, the building of the metropolis, the making of the suburbs, electrification and the highways, urban crisis, and the postindustrial landscape.
(Offered: Fall 2021)

Independent College Programs Courses
ICPR H112 GLOBAL SOLIDARITY AND LOCAL ACTIONS: INTERDEPENDENCE, SOCIAL CHANGE, AND HAVERFORD (1.0 Credit)
Nora Reynolds
Division: Social Science
Domain(s): B: Analysis of the Social World
This course embraces global interdependence while considering how individual identities relate to appropriate local civic actions. Participants review ideas and methods relevant for co-creating more just, inclusive, sustainable communities, advancing inquiry in dialogue with community-based partners of Haverford College.
(Typically offered: Every Year)

Philosophy Courses
PHIL H218 ENVIRONMENTAL PHILOSOPHY (1.0 Credit)
Benjamin Berger
Division: Humanities
Domain(s): A: Meaning, Interpretation (Texts)
In this course, we study various arguments in environmental ethics and environmental aesthetics in order to think more clearly about the value of living and non-living things. We do so through a close reading of contemporary and historical philosophical texts. Pre-requisite(s): One course in Philosophy or Environmental Studies 101
(Offered: Spring 2022; typically offered: Occasionally)

Writing Program Courses
WRPR H136 BLACK ECOLOGIES (1.0 Credit)
Tajah Ebram
This course engages writings and cultural works about Black eco-literary and ecological traditions. Black Ecologies focuses on the multiple ecological and spatial conditions that have over-determined Black life and relationships to nature including the middle passage, slavery, racial segregation, food apartheid, gentrification and even incarceration. All these phenomena have produced unequal access to natural resources, space, food and land through systems that racialize, gender and commodify space. By exploring Black cultural and land based worker’s literary, cultural, and community responses to anti-Black environmental conditions, we will consider how Black communities reclaim spatial autonomy through creative modes of collective liberation. Student's critical and creative writing will be based on course texts and outdoor experiences of observation and laboring collectively at Haverfarm. Open only to first-year students as assigned by the Director of College Writing. Crosslisted: AFST, ENVS.

Courses at Bryn Mawr

Anthropology Courses

ANTH B254 ANTHROPOLOGY AND SOCIAL SCIENCE RESEARCH METHODS (1.0 Credit)
Melissa Pashigian
Division: Humanities
This course is designed for students interested in learning ethnographic and qualitative social science methods, and how to analyze qualitative results. Through hands on fieldwork, students will learn and practice ethnographic field methods, for example, observation, participant observation, interviewing, use of visual media and drawing, life stories, generating and analyzing data, and ways to productively transform qualitative data into contextual information. Ethics in ethnographic research will be a central theme, as will envisioning and designing projects that protect human subjects. The purpose of this course is to provide anthropology majors and students in social sciences, humanities, as well as STEM majors with interests in multi-method research, an opportunity to learn methods in advance of their thesis proposal and research, Hanna Holborn Gray summer research, and other social science independent research opportunities during their undergraduate experience, and post-graduation.
(Offered: Fall 2021; typically offered: Occasionally)

Biology Courses

BIOL B210 BIOLOGY AND PUBLIC POLICY (1.0 Credit)
Karen Greif
Division: Natural Science
Domain(s): C: Physical and Natural Processes
A lecture/discussion course on major issues and advances in biology and their implications for public policy decisions. Topics discussed include reproductive technologies, the Human Genome project, environmental health hazards, bioterrorism, and euthanasia and organ transplantation. Readings include scientific articles, public policy and ethical considerations, and lay publications. Lecture three hours a week. This class involves considerable writing. Prerequisite: One semester of BIOL 110-111 or permission of instructor.
(Typically offered: Every Spring)

BIOL B220 ECOLOGY (1.0 Credit)
Thomas Mozdzer
Division: Natural Science
A study of the interactions between organisms and their environments. The scientific underpinnings of current environmental issues, with regard to human impacts, are also discussed. Students will also become familiar with ecological principles and with the methods ecologists use. Students will apply these principles through the design and implementation of experiments both in the laboratory and the field. Lecture three hours a week, laboratory/field investigation three hours a week. There will be optional field trips throughout the semester. Prerequisite: One semester of BIOL B110 or B111 or permission of instructor.
(Offered: Fall 2021; typically offered: Every Fall)

BIOL B225 BIOLOGY AND ECOLOGY OF PLANTS (1.0 Credit)
Sydne Record
Plants are critical to numerous contemporary issues, such as ecological sustainability, economic stability, and human health. Students will examine the fundamentals of how plants are structured, how they function, how they interact with other organisms, and how they respond to environmental stimuli. In addition, students will be taught to identify important local species, and will explore the role of plants in human society and ecological systems. One semester of BIOL 110/111.
(Offered: Spring 2022; typically offered: Occasionally)

BIOL B250 COMPUTATIONAL METHODS IN THE SCIENCES (1.0 Credit)
Sydne Record
Division: Natural Science
Domain(s): C: Physical and Natural Processes
A study of how and why modern computation methods are used in scientific inquiry. Students will learn basic principles of visualizing and analyzing scientific data through hands-on programming
exercises. The majority of the course will use the R programming language and corresponding open source statistical software. Content will focus on data sets from across the sciences. Six hours of combined lecture/lab per week.

(Typically offered: Every Fall)

BIOL B255 MICROBIOLOGY (1.0 Credit)
Monica Chander

Division: Natural Science
Domain(s): C: Physical and Natural Processes
Invisible to the naked eye, microbes occupy every niche on the planet. This course will examine how microbes have become successful colonizers; review aspects of interactions between microbes, humans and the environment; and explore practical uses of microbes in industry, medicine and environmental management. The course will combine lecture, discussion of primary literature and student presentations. Three hours of lecture and three hours of laboratory per week. Prerequisites: BIOL 110 and CHEM B104.

(Offered: Spring 2022; typically offered: Every Spring)

BIOL B323 COASTAL AND MARINE ECOLOGY (1.0 Credit)
Thomas Mozdzer
An interdisciplinary course exploring the ecological, biogeochemical, and physical aspects of coastal and marine ecosystems. We will compare intertidal habitats in both temperate and tropical environments, with a specific emphasis on global change impacts on coastal systems (e.g. sea level rise, warming, and species shifts). Lecture three hours, laboratory three hours per week. In 2020 the course will have a mandatory field trip to a tropical marine field station and an overnight field trip to a temperate field station in the mid-Atlantic. Prerequisite: BIOL B220 or BIOL B225.

(Typically offered: Every other Spring)

BIOL B332 GLOBAL CHANGE BIOLOGY (1.0 Credit)
Thomas Mozdzer
Global changes to our environment present omnipresent environmental challenges. We are only beginning to understand the complex interactions between organisms and the rapidly changing environment. Students will explore the effects of global change on ecosystems by critically reading and analyzing the primary literature and the latest IPCC report. In 2021, there will be a mandatory one-day field trip to the Smithsonian Global Change Research Wetland. Prerequisites: BIOL B220, BIOL 225 or BIOL B262, or permission of instructor.

(Typically offered: Every Year)

Growth and Structure of Cities Courses

CITY B201 INTRODUCTION TO GIS FOR SOCIAL AND ENVIRONMENTAL ANALYSIS (1.0 Credit)
Jennifer Hurley

Domain(s): B: Analysis of the Social World
This course is designed to introduce the foundations of GIS with emphasis on applications for social and environmental analysis. It deals with basic principles of GIS and its use in spatial analysis and information management. Ultimately, students will design and carry out research projects on topics of their own choosing. Prerequisite: At least sophomore standing and Quantitative Readiness are required (i.e. the quantitative readiness assessment or Quan B001).

(Offered: Spring 2022; typically offered: Every Year)

CITY B250 TOPICS: GROWTH & SPATIAL ORGANIZATION OF THE CITY (1.0 Credit)
Jeffrey Cohen
Division: Social Science
This is a topics course. Course content varies.

(Typically offered: Occasionally)

CITY B345 ADVANCED TOPICS IN ENVIRONMENT AND SOCIETY (1.0 Credit)
Min Kyung Lee
This is a topics course. Topics vary.

(Offered: Fall 2021; typically offered: Occasionally)

East Asian Languages and Cultures Courses

EALC B355 ANIMALS, VEGETABLES, MINERALS IN EAST ASIAN LITERATURE & FILM (1.0 Credit)
Shiamin Kwa
Division: Humanities
This semester, we will explore how artists question, explore, celebrate, and critique the relationships between humans and the environment. Through a topics-focused course, students will examine the ways that narratives about environment have shaped the way that humans have defined themselves. We will be reading novels and short stories and viewing films that contest conventional binaries of man and animal, civilization and nature, tradition and technology, and even truth and fiction. “Animals, Vegetables, Minerals” does not follow chronological or geographical frameworks, but chooses texts that engage the three categories enumerated as the major themes of our course. We will read and discuss animal theory, theories of place and landscape, and theories of modernization or mechanization; and there will be frequent (and intentional) overlap between these categories. We will also be watching films that extend our theoretical questions of these themes beyond national, linguistic, and generic borders. You are expected to view this course as a collaborative
process in which you share responsibility for leading discussion. There are no prerequisites or language expectations, but students should have some basic knowledge of East Asian, especially Sinophone, history and culture, or be willing to do some additional reading (suggested by the instructor) to achieve an adequate contextual background for exploring these texts.  
(Typically offered: Every other Fall)

Economics Courses

ECON B225 ECONOMIC DEVELOPMENT (1.0 Credit)  
Sebastian Anti  
Division: Social Science  
Domain(s): B: Analysis of the Social World  
Examination of the issues related to and the policies designed to promote economic development in the developing economies of Africa, Asia, Latin America, and the Middle East. Focus is on why some developing economies grow faster than others and why some growth paths are more equitable, poverty reducing, and environmentally sustainable than others. Includes consideration of the impact of international trade and investment policy, macroeconomic policies (exchange rate, monetary and fiscal policy) and sector policies (industry, agriculture, education, population, and environment) on development outcomes in a wide range of political and institutional contexts. Prerequisite: ECON B105.  
(Offered: Spring 2022; typically offered: Every Year)

ECON B242 ECONOMICS OF LOCAL ENVIRONMENTAL PROGRAMS (1.0 Credit)  
David Ross  
Division: Social Science  
Domain(s): B: Analysis of the Social World  
Considers the determinants of human impact on the environment at the neighborhood or community level and policy responses available to local government. How can economics help solve and learn from the problems facing rural and suburban communities? The instructor was a local township supervisor who will share the day-to-day challenges of coping with land use planning, waste disposal, dispute resolution, and the provision of basic services. Prerequisite: ECON B105.  
(Typically offered: Occasionally)

English Courses

ENGL B204 NATIVE LANDS, AMERICAN LITERATURES, 1607-1899 (1.0 Credit)  
This course will explore Anglophone narratives by white and Indigenous writers, between the arrival of the British in Jamestown and the Philippine-American War. We will examine narratives of conquest that understand colonial and US expansion across Indigenous lands as “manifest destiny,” and narratives of resistance that understand the same history as imperial conquest and genocide. It took a lot of storytelling, a lot of literary labor, to invent a destiny and to make it manifest on landscapes, peoples and nations. This class asks how certain ingredients of the master-narrative of colonial expansion and the American “wild west” - bloodthirsty, sexually dangerous tribal people, violent white outlaws, hard-working normative white families, empty landscapes, easy money - came to be essential to the American myth. And how were those stories resisted and rewritten even as they were being formed? Ultimately, we will interrogate the so-called “frontier,” exposing it as a vastly diverse network of Native-, African- Asian- and Euro-American peoples whose landscapes were already inhabited, already historied, already multinational. Materials examined may include early Indigenous narratives and anonymous writings by white and Indigenous people, and texts and narratives by John Smith, William Bradford, Mary Rowlandson, Tituba (Carib), Samson Occom (Mohegan), William Appess (Pequot), Lydia Maria Child, Catharine Maria Sedgwick, James Fennimore Cooper, Jane Johnston Schoolcraft (Ojibwe), Mary Jemison (Seneca), Black Hawk (Sauk), John Rollin Ridge (Cherokee), Sarah Winnemucca Hopkins (Paiute), Wovoka (Paiute), Stephen Crane, Rudyard Kipling and Mark Twain.  
(Offered: Fall 2021; typically offered: Occasionally)

ENGL B293 ANIMAL, VEGETABLE, MINERAL: MEDIEVAL ECOLOGIES (1.0 Credit)  
Jamie Taylor  
This course explores relationships between natural, non-human, and human agents in the Middle Ages. Reading natural philosophy, vernacular literature, and theological treatises, we examine how the Middle Ages understood supposedly "modern" environmental concepts like climate change, sustainability, animal rights, and protected land.  
(Offered: Spring 2022; typically offered: Occasionally)

Environmental Studies Courses

ENVS B101 INTRODUCTION TO ENVIRONMENTAL STUDIES (1.0 Credit)  
Talia Young, Staff  
The course offers a cross-disciplinary introduction to environmental studies. Tracing an arc from historical analysis to practical engagement, distinctive approaches to key categories of environmental inquiry are presented: political ecology, earth science, energy, economics, public health, ecological design, sustainability, public policy, and environmental ethics. Basic concepts,
such as thermodynamics, biodiversity, cost-benefit analysis, scale, modernization, enclosure, the commons, and situational ethics, are variously defined and employed within specific explorations of environmental challenges in the modern world. No divisional credit is awarded for this course at Haverford nor does the course satisfy any of the Bryn Mawr approaches to inquiry.

(Offered: Spring 2022; typically offered: Every Year)

**ENVS B202 ENVIRONMENT AND SOCIETY (1.0 Credit)**

*Carol Hager*

**Division:** Social Science  
**Domain(s):** B: Analysis of the Social World  

An exploration of the ways in which different cultural, economic, and political settings have shaped issue emergence and policy making. We examine the politics of particular environmental issues in selected countries and regions, paying special attention to the impact of environmental movements. We also assess the prospects for international cooperation in addressing global environmental problems such as climate change. Pre-requisite ENVS B101 or ENVS H101 or instructor's permission.

(Offered: Fall 2021; typically offered: Every Fall)

**ENVS B203 ENVIRONMENTAL HUMANITIES: STORIES OF JUSTICE AND INJUSTICE (1.0 Credit)**

*Anastasia Baginski*

**Division:** Humanities  
**Domain(s):** A: Meaning, Interpretation (Texts); B: Analysis of the Social World  

Bringing the traditional focus of the humanities-questions of meaning, value, ethics, justice and the politics of knowledge production-into environmental domains calls for a radical reworking of a great deal of what we think we know about ourselves and our fields of inquiry. Inhabiting the difficult space of simultaneous critique and action, this course will re-imagine the proper questions and approaches of the humanities, asking how our accumulated knowledge and practice might be refashioned to meet current environmental challenges, to productively rethink ‘the human’ in more than human terms. In order to resituate the human within the environment, and to resituate nonhumans within cultural and ethical domains, we will draw on a range of texts and films, and engage in a range of critical and creative practices of our own. Critical Interpretation (CI); Cross-Cultural Analysis (CC). Writing in the major/Intensive. Prerequisite: ENVS H101 or B101. (hard check prerequisite). Enrollment cap: 18. Lottery Preference(s): Senior ENVS majors, Junior ENVS majors, Sophomores, first-year students. Minors and non-majors by instructor’s permission.

(Outlined: Fall 2021, Spring 2022; typically offered: Every Spring)

**ENVS B204 PLACE, PEOPLE AND PRAXIS IN ENVIRONMENTAL STUDIES (1.0 Credit)**

*Sara Grossman*  

**Division:** Social Science  
**Domain(s):** A: Meaning, Interpretation (Texts); B: Analysis of the Social World  

This course offers a cross-disciplinary introduction to community-based learning. Working with local community groups, students will learn the fundamental skills of praxis work applied to environmental issues within an inquiry-based framework. Pre-requisite: ENVS B101 or ENVS H101 and (ENVS B202, H202, B203, or H203) or instructor's permission.  

(Typically offered: Every Fall)

**ENVS B350 ADVANCED TOPICS IN ENVIRONMENTAL STUDIES (1.0 Credit)**

*Anastasia Baginski, Staff*  

This is a topics course. Course content varies.  

(Offered: Fall 2021; typically offered: Occasionally)

**ENVS B397 SENIOR SEMINAR IN ENVIRONMENTAL STUDIES (1.0 Credit)**

*Sara Grossman*  

This capstone Environmental Studies course is designed to allow Environmental Studies seniors to actively engage in environmental problem solving. Students bring the perspectives and skills gained from their ENVS focus area and from their preparatory work in the major/minor to collaborate on interdisciplinary projects.  

(Typically offered: Every Fall)

**Geology Courses**

**GEOL B101 HOW THE EARTH WORKS (1.0 Credit)**

*Arlo Weil, Katherine Marenco*  

**Division:** Natural Science  
**Domain(s):** C: Physical and Natural Processes  

An introduction to the study of planet Earth—the materials of which it is made, the forces that shape its surface and interior, the relationship of geological processes to people, and the application of geological knowledge to the search for useful materials. Laboratory and fieldwork focus on learning the tools for geological investigations and applying them to the local area and selected areas around the world. Three lectures and one afternoon of laboratory or fieldwork a week. One required one-day field trip on a weekend.  

(Offered: Fall 2021; typically offered: Every Fall)
GEOL B203 BIOSPHERE THROUGH TIME (1.0 Credit)
Katherine Marenco, Pedro Marenco
Division: Natural Science
We will explore how the Earth-life system has evolved through time by studying the interactions between life, climate, and tectonic processes. During the lab component of the course, we will study important fossil groups to better understand their paleoecology and roles in the Earth-life system. Prerequisite: GEOL B101, GEOL B108, or GEOL B209. (Offered: Fall 2021; typically offered: Every Fall)

GEOL B206 ENERGY RESOURCES AND SUSTAINABILITY (1.0 Credit)
Staff
Division: Natural Science
An examination of issues concerning the supply of energy required by humanity. This includes an investigation of the geological framework that determines resource availability, aspects of energy production and resource development and the science of global climate change. Two 90-minute lectures a week. Suggested preparation: one year of college science. (Typically offered: Occasionally)

GEOL B209 NATURAL HAZARDS (1.0 Credit)
Katherine Marenco
Division: Natural Science
Domain(s): C: Physical and Natural Processes
A quantitative approach to understanding the earth processes that impact human societies. We consider the past, current, and future hazards presented by geologic processes, including earthquakes, volcanoes, landslides, floods, and hurricanes. The course includes discussion of the social, economic, and policy contexts within which natural geologic processes become hazards. Case studies are drawn from contemporary and ancient societies. Lecture three hours a week. (Offered: Spring 2022; typically offered: Occasionally)

GEOL B302 LOW-TEMPERATURE GEOCHEMISTRY (1.0 Credit)
Pedro Marenco
Division: Natural Science
Stable isotope geochemistry is one of the most important subfields of the Earth sciences for understanding environmental and climatic change. In this course, we will explore stable isotopic fundamentals and applications including a number of important case studies from the recent and deep time dealing with important biotic events in the fossil record and major climate changes. Prerequisites: GEOL 101 or GEOL 102, and at least one semester of chemistry or physics, or professor approval. (Typically offered: Occasionally)

History Courses
HIST B212 PIRATES, TRAVELERS, AND NATURAL HISTORIANS: 1492-1750 (1.0 Credit)
Ignacio Gallup-Diaz
Division: Social Science
In the early modern period, conquistadors, missionaries, travelers, pirates, and natural historians wrote interesting texts in which they tried to integrate the New World into their existing frameworks of knowledge. This intellectual endeavor was an adjunct to the physical conquest of American space, and provides a framework though which we will explore the processes of imperial competition, state formation, and indigenous and African resistance to colonialism. (Typically offered: Occasionally)

Mathematics Courses
MATH B151 INTRODUCTION TO MATH AND SUSTAINABILITY (1.0 Credit)
Division: Natural Science; Quantitative
The world faces many sustainability challenges: climate change, energy, over-population, natural resource depletion. Using techniques of mathematical modeling including dynamical systems and bifurcation theory (tipping points), we will study quantitative aspects of these problems. No advanced mathematics beyond high school mathematics (pre-calculus) is required. (Typically offered: Occasionally)

MATH B295 SELECT TOPICS IN MATHEMATICS (1.0 Credit)
Leslie Cheng
Division: Does not satisfy Haverford QU; Natural Science
Domain(s): C: Physical and Natural Processes
This is a topics course. Course content varies. Not all topics are open to first year students. (Offered: Fall 2021, Spring 2022; typically offered: Every Year)

Philosophy Courses
PHIL B238 SCIENCE, TECHNOLOGY AND THE GOOD LIFE (1.0 Credit)
Robert Dostal
Division: Humanities
"Science, Technology, and the Good Life" considers the relation of science and technology to each other and to everyday life, particularly with respect to questions of ethics and politics. In this course, we try to get clear about how we understand these domains and their interrelationships in our contemporary world. We try to clarify the issues relevant to these questions by looking at the contemporary debates
about the role of automation and digital media and the problem of climate change. These debates raise many questions including: the appropriate model of scientific inquiry (is there a single model for science?, how is science both experimental and deductive?, is science merely trial and error?, is science objective?, is science value-free?), the ideological standing of science (has science become a kind of ideology?), the autonomy of technology (have the rapidly developing technologies escaped our power to direct them?), the politics of science (is science somehow essentially democratic?, and are "scientific" cultures more likely to foster democracy?, or is a scientific culture essentially elitist and autocratic?), the relation of science to the formation of public policy (experts rule?, are we in or moving toward a technocracy?), the role of technology and science in the process of modernization, Westernization, and globalization (what role has science played in industrialization and what role does it now play in a post-industrial world?). To find an appropriate way to consider these questions, we look at the pairing of science with democracy in the Enlightenment project and study contemporary work in the philosophy of science, political science, and ethics. (Typically offered: Occasionally)

Political Science Courses

POLS B256 GLOBAL POLITICS OF CLIMATE CHANGE (1.0 Credit)
Carol Hager
This course will introduce students to important political issues raised by climate change locally, nationally, and internationally, paying particular attention to the global implications of actions at the national and subnational levels. It will focus not only on specific problems, but also on solutions; students will learn about some of the technological and policy innovations that are being developed worldwide in response to the challenges of climate change. Only open to students in 360 program. (Typically offered: Every other Spring)

POLS B310 COMPARATIVE PUBLIC POLICY (1.0 Credit)
Carol Hager
Division: Social Science
A comparison of policy processes and outcomes across space and time. Focusing on particular issues such as health care, domestic security, water and land use, we identify institutional, historical, and cultural factors that shape policies. We also examine the growing importance of international-level policy making and the interplay between international and domestic pressures on policy makers. Writing attentive. Prerequisite: One course in Political Science or public policy. (Typically offered: Occasionally)

POLS B321 TECHNOLOGY AND POLITICS (1.0 Credit)
Carol Hager
Division: Social Science
A multi-media analysis of the complex role of technology in political and social life. We focus on the relationship between technological change and democratic governance. We begin with historical and contemporary Luddism as well as pro-technology movements around the world. Substantive issue areas include security and surveillance, electoral politics, economic development and women's empowerment, civil rights, warfare, social media and information/disinformation politics, agriculture, climate change and energy politics, and pandemic response. This course is open to all students who have the prerequisites. It also counts as a thesis prep course for political science majors. Prerequisite: One course in Political Science, or ENVS 202, or permission of instructor. Writing attentive. (Offered: Fall 2021; typically offered: Occasionally)

POLS B339 BUREAUCRACY & DEMOCRACY IN AMERICA (1.0 Credit)
Marissa Golden
Division: Social Science
Domain(s): B: Analysis of the Social World
This course is an upper-level seminar designed primarily for juniors and seniors who want to spend the Semester reading about and discussing the role of the federal bureaucracy in the U.S. political system. Topics will include the history of the federal bureaucracy, the bureaucratic policymaking process & administrative law, the roles of expertise and politics in agency decision-making, the competition among the three constitutional branches to “control” the bureaucracy, and the normative goals of competence, responsiveness and representativeness. Discussion of current events - including the federal government’s response to COVID and the role of race in public administration - will be a central part of the seminar. Attention will also be paid - and assignments oriented towards - preparing students for the Senior Experience.
